SKILLS

- Full-Stack Web Dev
- Android Development
- Backend Development
- UI/UX Development
- RESTful API Design
- Database Design
- IoT Development
- System Architecture

TECH STACK

- Java · PHP · JavaScript
- React.js · Next.js
- React Native
- MySQL · Firebase · SQLite
- Git · Postman · VS Code
- Android Studio · IntelliJ
- HTML & CSS · Bootstrap

EDUCATION

BSc (Hons) Software Eng.
Birmingham City University
(via Java Institute, LK)
2024 – 2026

Higher Diploma — SE
UK Awards, Java Institute
2023 – 2024

Diploma — SE
UK Awards, Java Institute
2022 – 2023

R. Rashmi Kaveesha

Software Engineer / Full-Stack Developer

PROFILE

Results-driven Software Engineer with a BSc (Hons) Second Class Upper Division from Birmingham City University. Over 2 years of hands-on industry experience delivering scalable POS systems, e-learning platforms, and enterprise web applications. Proficient across the full stack — Java, PHP, JavaScript, React, and MySQL — with a strong focus on clean architecture, professional UI/UX, and production-grade reliability. Equally effective working independently or within cross-functional teams.

PROFESSIONAL EXPERIENCE

Software Engineer / Full-Stack Developer

ENVIZ Softwares (PVT) LTD | Colombo, Sri Lanka
January 2023 – Present

- Designed and delivered scalable POS systems, dashboards, and web applications using Java, PHP, JavaScript, Bootstrap, and MySQL, reducing manual processing time by ~30%.
- Built RESTful API integrations and backend services supporting live production workloads for 500+ active users.
- Contributed to the architecture of Learning Management Systems (LMS) serving 200+ learners and enterprise business platforms.
- Developed responsive, accessible UI components that improved page load performance by 25% and user engagement.
- Performed debugging, unit testing, and system optimization, reducing critical bug count by 40% across production environments.
- Collaborated with designers, QA, and product owners to ship 10+ reliable software releases on schedule.

KEY PROJECTS

Food & Food Seller — Android E-Commerce Platform Jan – Feb 2025 (Completed)
Tech: Java (Android), Firebase, SQLite, Hibernate, MySQL, Google Maps API

- Built a two-sided marketplace: customer app for browsing/ordering and seller app for inventory, order, and delivery management .
- Integrated Google Maps API for live delivery tracking with animated charts for real-time sales analytics.

Kity — Cross-Platform Chat App Nov 2024 (Completed)
Tech: React Native, JavaScript, React Navigation, Emoji Picker

- Developed a real-time chat app for Android & iOS with contacts, messaging, and emoji reactions, supporting 50+ concurrent users in testing.
- Focused on smooth animations, intuitive UX, and clean cross-platform architecture.

National Bank — Enterprise Banking System Apr 2025 (Completed)
Tech: J2EE, EJB, JPA, JAAS, Jakarta Security, MySQL, Hibernate

- Engineered a secure multi-role banking system with account creation, fund transfers, and user management handling 1,000+ simulated transactions.
- Used EJB Timers for scheduled operations, Interceptors for audit logging, and JAAS for role-based access control.

Luxury Auction — Distributed Auction Platform May – Jun 2025 (Completed)
Tech: Java, EJB, JMS, JSP, WebSocket, Gson, HTML/CSS/JS

- Real-time distributed auction platform with bidding, auto-bidding, and fair-priority queuing — processed 500+ concurrent bids in load testing.
- Live bid updates via JMS & WebSocket; in-memory state managed with session beans and Gson.

3D Adventure Game — Knight vs Monster Apr 2025 (Completed)
Tech: Unity, C#, NavMesh, 3D Assets, AudioFX

- 3D action-adventure game with enemy AI, combat mechanics, health systems, and jungle environment — achieved stable 60 FPS on mid-range hardware.
- Optimised performance; integrated realistic sound and animation for immersive gameplay.
